

Warner Bros. Studios' Energy Efficiency Improvements Save \$1 Million Annually

Warner Bros. Studios saved over 8 million kilowatt-hours — a 14% reduction — and more than \$1 million in 2005. Energy efficiency improvements initiated after a campus-wide energy audit included: T8, compact fluorescent and high-bay T5 lights, variable frequency drives on fan motors, programmable thermostats, and energy-efficient boilers and water heaters. Studio tours for 72,000 annual visitors include information about the improvements. In May, Warner Bros. Studios, a 2005 Flex Your Power Energy Efficiency Award winner, launched an environmental initiatives website, which documents the studio's energy efficiency and green building efforts and provides examples of environmental practices that can save money and conserve resources. <http://wbenvironmental.warnerbros.com/>
